equal balance between industries with increasing and decreasing employment. Data for the 1-, 3-, and 6-month spans are seasonally adjusted; those for the 12-month span are unadjusted. Data are centered within the span. Data beginning in 1989 are not comparable to those for earlier years because of coverage differences associated with the 1987 SIC revision. Prior to 1989, the index for the private sector was based on 349 3-digit industries; the manufacturing index on 141 3-digit industries.

[26] Derived by assuming that overtime hours are paid at the rate of time and one-half.

[27] 11-month average.

[28] Data for August 1945 are excluded because of the VJ-Day holiday period.

[29] Prior to January 1956, data were based on the application of adjustment factors to average hourly earnings. (See *Monthly Labor Review,* May 1950, pp. 537-540.)

[30] These seasonally adjusted average weekly hours and manufacturing overtime hours series have been adjusted back to 1980 to incorporate a moving holiday adjustment. A detailed description of this adjustment appears in the January 1990 issue of *Employment and Earnings.*

^{p} = preliminary.

Appendix A. Measuring Nonfarm Payroll Employment, Hours, and Earnings

Data on nonfarm payroll employment, hours, and earnings are collected from the Current Employment Statistics (CES) program, commonly referred to as the establishment survey. The CES is a Federal-State cooperative endeavor in which data are collected from the payroll records of a sample of nonfarm business establishments. In 1990, the sample included over 340,000 establishments employing over 40 million wage and salary workers. This appendix describes the method of collection, concepts, scope, and estimating methods used in the preparation of the employment, hours, and earnings series derived from the CES program.

Collection

Federal-State cooperation

Under cooperative arrangements between the States and the Bureau of Labor Statistics, responding establishments report employment, hours, and earnings data to State agencies. The State agencies mail payroll report forms to the establishments and examine the returns for consistency, accuracy, and completeness. The States use the reported data to prepare State and area statistics and also send the reported data to BLS for use in preparing the national series. This avoids a duplicate reporting burden on establishments and, together with the use of similar estimating techniques at the national and State levels, promotes increased comparability between estimates.

Shuttle schedules

Data are collected on Form BLS 790—Report on Employment, Payroll, and Hours. The collecting agency returns the schedule to the respondent each month so that the next month's data can be entered on the space allotted for that month. This "shuttle" procedure assures maximum comparability and accuracy of reporting, since the respondent can see the figures that have been reported for previous months.

Form BLS 790 provides for entry of data on the total number of workers—all employees, women workers, production workers, and nonsupervisory workers—on the payrolls of nonfarm establishments and, for most industries, payroll and hours of production or nonsupervisory workers for the pay period which includes the 12th of the month.

Concepts

Industrial classification

Establishments reporting on Form BLS 790 are classified into industries on the basis of their principal product or activity, determined from information on annual sales volume. This information is collected on a supplement to the quarterly unemployment insurance tax reports filed by employers. For an establishment making more than one product or engaging in more than one activity, the entire employment of the establishment is included in the industry of the principal product or activity.

All national, State, and area employment, hours, and earnings series are classified according to the 1987 *Standard Industrial Classification Manual*, published by the Office of Management and Budget. The conversion to the 1987 SIC, effective with the publication of August 1990 data, and its effect on published series appear in appendix C.

Industry employment

Employment data, except those for employees of the Federal Government, refer to persons on establishment payrolls who received pay for any part of the pay period which includes the 12th of the month. For Federal Government establishments, employment figures represent the number of persons who occupied positions on the last day of the calendar month. Intermittent workers are counted if they performed any service during the month.

Footnotes

[1] Includes all divisions except government.

[2] Data relate to production workers in mining and manufacturing; construction workers in construction; and nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services.

[3] Includes mining, construction, and manufacturing.

[4] Data relate to production workers in mining and manufacturing and construction workers in construction.

[5] Includes anthracite mining, formerly major group 11.

[6] Formerly major group 12. Data reflect changes in industrial coverage.

[7] Excludes natural gas liquids, SIC 132.

[8] The 1972 and 1987 SIC codes for these industries and/or aggregates are the same but the industrial coverage and, in some instances, industry titles have been changed. To the extent possible, historical series have been reconstructed.

[9] For these industries and/or aggregates, only the titles have been changed. The SIC codes and industrial coverage are the same as in the 1972 structure.

[10] For these industries and/or aggregates, the titles were unchanged; however, the SIC codes are new and the industrial coverage has been redefined. To the extent possible, historical series have been reconstructed.

[11] Beginning with October 1983, traditional average hourly earnings series, excluding lump-sum payments, for selected aerospace industries are published in conjunction with special earnings series, which include lump-sum payments. For additional information, see "A Note on Average Hourly Earnings in Aircraft (SIC 3721) and Guided Missiles and Space Vehicles (SIC 3761) Manufacturing" in the June 1988 and subsequent issues of *Employment and Earnings.* Data for October 1983 forward are provided in the Special Series section of this bulletin.

[12] Data are not computed or published. Also, see footnote 11.

[13] For these industries and or aggregates, the SIC codes are new; the industrial coverage was unchanged.

[14] Includes transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; services; and government.

[15] Excludes government.

[16] Data relate to nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services.

[17] Data are based on reports summarized in the M-300 report by the Interstate Commerce Commission and relate to employment at the middle of the month. Hours and earnings averages are based upon monthly data (exclusive of switching and terminal companies) and relate to all employees who received pay during the month, with the exception of executives, officials, and staff assistants (ICC Group 1). Beginning in January 1978, data relate to line-haul railroads with annual operating revenues of $50 million or more. For the years 1976-77, $10 million or more; 1965-75, $5 million or more; 1956-64, $3 million or more; and prior to 1956, $1 million or more.

[18] Beginning in June 1949, data relate to all nonsupervisory employees and are not strictly comparable with those for prior years because of differences in coverage. Annual data for 1945 represent a 9-month (April-December) average.

[19] Money payments only; tips and the value of other payment in kind, such as free meals, uniforms, room and board, etc., are not included.

[20] Data for nonoffice sales agents are excluded from all nonsupervisory worker series in this division; for SIC's 63 and 631-633, since 1964.

[21] Total employee counts are provided by the Office of Personnel Management. Detailed industry estimates for the Executive Branch as well as those for women are derived from a BLS sample of over 5,000 reports. Data relate to civilian employment only and exclude the Central Intelligence Agency and the National Security Agency.

[22] Beginning in January 1969, approximately 39,000 civilian technicians of the National Guard were transferred from State to Federal status in accordance with Public Law 90-486.

[23] Beginning in January 1983, includes rural mail carriers, an addition of 23,800 employees.

[24] Data for the summer period are adjusted to include regular full-time teachers whether or not they were paid in those months.

[25] Figures are the percent of industries with employment increasing plus one-half of the industries with unchanged employment, where 50 percent indicates an

The data exclude proprietors, the self-employed, unpaid volunteer or family workers, farm workers, and domestic workers. Salaried officers of corporations are included. Government employment covers only civilian employees; military personnel are excluded. Employees of the Central Intelligence Agency and the National Security Agency are also excluded.

Persons on establishment payrolls who are on paid sick leave (when pay is received directly from the firm), on paid holiday or paid vacation, or who work during a part of the pay period even though they are unemployed or on strike during the rest of the period, are counted as employed. Not counted as employed are persons who are laid off, on leave without pay, or on strike for the entire period, or who are hired but have not been paid during the period.

Industry hours and earnings

Hours and earnings data are derived from reports of payrolls and hours for production and related workers in manufacturing and mining, construction workers in construction, and nonsupervisory employees in the remaining private nonfarm components. These terms are defined below. When the pay period reported is longer than 1 week, the figures are converted to a weekly basis.

Production and related workers include working supervisors and all nonsupervisory workers (including group leaders and trainees) engaged in fabricating, processing, assembling, inspecting, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial and guard services, product development, auxiliary production for a plant's own use (e.g., power plant), and recordkeeping and other services closely associated with the above production operations.

Construction workers include the following employees in the construction division: Working supervisors, qualified craft workers, mechanics, apprentices, laborers, etc., whether working at the site of construction or in shops or yards, at jobs ordinarily performed by members of the construction trades (such as precutting and preassembling).

Nonsupervisory employees include employees (not above the working supervisory level) such as office and clerical workers, repairers, salespersons, operators, drivers, physicians, lawyers, accountants, nurses, social workers, teachers, research aides, drafters, photographers, beauticians, musicians, restaurant workers, custodial workers, attendants, line installers, laborers, janitors, guards, and other employees at similar occupational levels, whose services are closely associated with those of the employees listed.

Payroll covers the payroll for full- and part-time production, construction, or nonsupervisory workers who received pay for any part of the pay period which includes the 12th of the month. The payroll is reported before deductions of any kind, e.g., for old-age and unemployment insurance, group insurance, withholding taxes, bonds, or union dues; also included is pay for overtime, holidays, vacations, and sick leave paid directly by the firm. Bonuses (unless earned and paid regularly each pay period), other pay not earned in the pay period reported (e.g., retroactive pay), tips, and the value of free rent, fuel, meals, or other payment in kind are excluded. Moreover, "fringe benefits" (such as health and other types of insurance, contributions to retirement, etc., paid by the employers) are also excluded.

Hours cover hours paid for during the pay period which includes the 12th of the month, for production, construction, or nonsupervisory workers. The hours data include hours paid for holidays and vacations, and for sick leave when pay is received directly from the firm.

Overtime hours cover hours worked by production or related workers for which overtime premiums were paid because the hours exceeded the number of hours of either the straight-time workday or the workweek during the pay period which includes the 12th of the month. Weekend and holiday hours are included only if overtime premiums were paid. Hours for which only shift differential, hazard, incentive, or other similar types of premiums were paid are excluded.

Average weekly hours relate to the average hours for which pay *was* received and are different from standard or scheduled hours. Such factors as absenteeism, labor turnover, part-time work, and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect changes in the workweek of component industries.

Average overtime hours represent that portion of average weekly hours which exceeds regular hours and for which overtime premiums are paid. If an employee were to work on a paid holiday at regular rates, receiving as total compensation holiday pay plus straight-time pay for hours worked that day, no overtime hours would be reported.

Since overtime hours are premium hours by definition, average weekly hours and overtime hours do not necessarily move in the same direction from month to month. Such factors as stoppages, absenteeism, and labor turnover may not have the same influence on overtime as on average hours. Diverse trends at the industry-group level also may be caused by a marked change in average hours for a component industry where little or no overtime was worked in both the previous and current months.

Average hourly earnings are on a "gross" basis. They reflect not only changes in basic hourly and incentive wage rates but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. They also reflect shifts in the number of employees between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Averages of hourly earnings differ from wage rates. Earnings are gross pay for a stated period of time; rates are the amounts stipulated for a given unit of work or time. The earnings series do not measure the level of total labor costs on the part of the employer since the following are excluded: Irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings for those employees not covered under the production worker, construction worker, or nonsupervisory employee definitions.

Average hourly earnings including lump-sum wage payments are compiled only for aircraft (SIC 3721) and guided missiles and space vehicles (SIC 3761) manufacturing. The same concepts and estimation methods apply to these series as apply to the average hourly earnings series described above; the one difference between the series is definitional. The payroll data used to calculate this series include lump-sum payments made to production workers in lieu of general wage rate increases; such payments are excluded from the definition of gross payrolls used to calculate the other average hourly earnings series.

For each sample establishment in SIC 3721 and SIC 3761 covered by a lump-sum agreement, the reported payroll data are adjusted to include a prorated portion of the lump-sum payment. Such payments are generally made once a year and cover the following 12-month period. In order to spread the payment across this time period, a prorated portion of the payment is added to the payroll each month. This prorated portion is adjusted by an exit rate to reduce the lump-sum amount to account for persons who received the payment but left before the payment allocation period expired.

Average hourly earnings excluding overtime are computed by dividing the total production worker payroll for the industry group by the sum of the total production worker hours and one-half of total overtime hours. Only earnings due to overtime paid for at 1-1/2 times the straight-time rates are eliminated. No adjustment is made for other premium payment provisions, such as holiday work, late-shift work, and overtime rates other than time and one-half.

Railroad hours and earnings figures relate to Class I railroads (excluding switching and terminal companies) and are derived from monthly data summarized in the M-300 report of the Interstate Commerce Commission. Data refer to all employees, except executives, officials, and staff assistants (ICC group 1), who received pay during the month. Average hourly earnings are computed by dividing total compensation by total hours paid for. Average weekly hours are obtained by dividing the total number of hours paid for, converted to a weekly basis, by the number of employees, as defined above.

Average weekly earnings are derived by multiplying average weekly hours by average hourly earnings. Therefore, weekly earnings are affected not only by changes in average hourly earnings but also by changes in the length of the workweek. In addition, monthly variations in such factors as the proportion of part-time workers, stoppages for varying reasons, labor turnover during the survey period, and absenteeism for which employees are not paid may cause the average workweek to fluctuate.

Long-term trends of average weekly earnings can be affected by structural changes in the makeup of the work force. For example, persistent long-term increases in the proportion of part-time workers in retail trade and many of the services industries have reduced average workweeks in these industries and have affected the average weekly earnings series.

Real earnings, or earnings in constant dollars, are calculated from the earnings averages for the current month by using a deflator derived from the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W).

Indexes

Indexes of aggregate weekly hours and payrolls are derived by dividing the current month's aggregate by the annual average aggregate for 1982. The hours aggregates are the product of average weekly hours and production worker employment; the payroll aggregates are the product of the hours aggregates and average hourly earnings. At all the higher levels of aggregation, hours and payroll aggregates are the sum of the component aggregates.

Diffusion indexes of employment change measure the dispersion among industries of the change in employment over the specified time span. The overall indexes are calculated from 356 seasonally adjusted employment series (3-digit SIC industries) covering all nonfarm payroll employment in the private sector. The manufacturing diffusion indexes are based on 139 3-digit industries. Prior to 1989, the overall and manufacturing indexes comprised 349 and 141 industries, respectively.

To derive the indexes, each component industry is assigned a value of 0, 50, or 100 percent, depending on whether its employment showed a decrease, no change, or an increase, respectively, over the time span. The average value (mean) is then calculated, and this percent is the diffusion index number.

The reference point for diffusion analysis is 50 percent, the value which indicates that the same number of component industries had increased as had decreased. Index numbers above 50 show that more industries had increasing employment, and values below 50 indicate that more had decreasing employment. The margin between the percent that increased and the percent that decreased is equal to the difference between the index and its complement, i.e., 100 minus the index. For example, an index of 65 percent means that 30 percent more industries had increasing employment than had decreasing employment (65-(100-65) = 30). However, for dispersion analysis, the distance of the index number from the 50-percent reference point is the most significant observation.

Although diffusion indexes are commonly interpreted as showing the percent of components that increased over the time span, it should be remembered that the index reflects half of the unchanged components as well. (This is the effect of assigning a value of 50 percent to the unchanged components when computing the index.)

Estimating Methods

The principal features of the procedure used to estimate employment for the industry statistics are (1) the use of the "link relative" technique, which is a form of ratio estimation, (2) the use of size and regional stratification, and (3) periodic adjustment of employment levels to new benchmarks. Other features of the procedures are summarized in table A-1. Further details are given in the *BLS Handbook of Methods*, Bulletin 2285 (1988), chapter 2.

The "link relative" technique

From a sample composed of establishments reporting for both the previous and current months, the ratio of current-month employment to that of the previous month is computed. This is called a "link relative." The estimates of employment (all employees including production and nonproduction workers) for the current month are obtained by multiplying the estimates for the previous month by these "link relatives." In addition, bias correction factors are applied to most employment estimates each month. The size of the bias correction factors is determined from past benchmark comparisons. Beginning with data for April 1983, these factors are modified by changes in the sample link relatives for the most recent quarter.

Size and regional stratification

A number of industries are stratified by size of establishment and/or by region, and the stratified production or nonsupervisory worker data are used to weight the hours and earnings estimates into broader industry groupings. Accordingly, the basic estimating cell for an employment, hours, or earnings series may be a whole industry or a size stratum, a region stratum, or a size stratum of a region within an industry. This stratified estimating procedure offsets the tendency of the sample to produce biased estimates for certain industries.

Benchmark adjustments

Employment estimates are compared periodically with benchmarks (comprehensive counts of employment) for various nonfarm industries, and appropriate adjustments are made as indicated. The industry estimates in this publication are projected from March 1989 benchmark levels. Unadjusted data from April 1989 forward and seasonally adjusted data from January 1986 forward are subject to adjustment to future benchmarks. Benchmark adjustments are made annually.

The primary sources of benchmark information are the employment data by industry, compiled quarterly by State agencies from reports of establishments covered under State unemployment insurance laws. These tabulations cover about 98 percent of employees on nonfarm payrolls in the United States. Benchmark data for the residual are obtained from the records of the Social Security Administration, the Interstate Commerce Commission, and a number of other agencies in private industry or government.

The estimates for the benchmark month are compared with new benchmark levels for each estimating cell. If revisions are necessary, the monthly series of estimates between benchmark periods are adjusted by correcting the differences between the new benchmark and the preceding one. The new benchmark for each industry then is carried forward progressively to the current month by use of the sample trends. Thus, the benchmark is used to establish the level of employment; the sample is used to measure the month-to-month changes in the level. A comparison of nonfarm employment benchmarks and 1987 SIC-based estimates for March 1989 is shown in table A-2.

The Sample

Design

The sampling plan used in the CES program is an optimum allocation design known as "sampling proportionate to average size of establishment." Under this type of design, large establishments fall into the sample with certainty. The size of the samples for the various industries is determined on the basis of experience and cost considerations. In a manufacturing industry in which a large proportion of total employment is concentrated in relatively few establishments, a large percentage of total employment is included in the sample. Consequently, the sample design for such industries provides for a complete census of the larger establishments with only a few chosen from among the smaller establishments, or none at all if the concentration of employment is great enough. On the other hand, in an industry in which a large proportion of total employment is in small establishments, the sample design calls for inclusion of all large establishments and also for a substantial number of smaller ones. Many industries in the trade and services divisions fall

Table A-2. Comparison of nonfarm employment benchmarks and estimates for March 1989

(Numbers in thousands)

Industry	Benchmark	1987 SIC-based estimate	Difference	
			Level	Percent
Total	107,026	107,073	-47	(1)
Mining	678	703	-25	-3.7
Construction	4,741	4,813	-72	-1.5
Manufacturing	19,396	19,585	-189	-1.0
Transportation and public utilities	5,549	5,646	-97	-1.7
Wholesale trade	6,195	6,145	50	.8
Retail trade	19,115	19,023	92	.5
Finance, insurance, and real estate	6,639	6,714	-75	-1.1
Services	26,702	26,479	223	.8
Government	18,011	17,965	46	.3

[1] Less than 0.05 percent.

into this category. To keep the sample to a size which can be handled by available resources, it is necessary to design samples for these industries with a smaller proportion of universe employment than is the case for most manufacturing industries. Since individual establishments in the nonmanufacturing division generally show less fluctuation from regular cyclical or seasonal patterns than do establishments in manufacturing industries, these smaller samples (in terms of employment) generally produce reliable estimates.

In the context of the CES program, with its emphasis on producing timely data at minimum cost, a sample must be obtained which will provide coverage of a sufficiently large segment of the universe to provide reasonably reliable estimates that can be published promptly and regularly. The present sample meets these specifications for most industries. The sample design allows BLS to produce preliminary estimates each month for many industries within a few weeks after reports are mailed by respondents. At a somewhat later date, estimates in considerably greater industrial detail are also made available.

Coverage

The BLS sample of establishment employment and payrolls is the largest monthly sampling operation in the field of social statistics. Table A-3 shows the latest benchmarks and the approximate proportion of total employment in each industry division covered by the sample of establishments furnishing monthly employment data. The coverage for individual industries within the division may vary from the proportions shown.

Table A-3. Employment benchmarks and approximate coverage of BLS employment and payrolls sample, March 1989

Industry	Benchmark (thousands)	Sample coverage[1]		
		Number of establishments	Employees	
			Number (thousands)	Percent of benchmark
Total	107,026	282,003	39,158	37
Mining	678	3,352	261	38
Construction	4,741	27,194	948	20
Manufacturing	19,396	51,253	9,377	48
Transportation and public utilities	5,549	[2]14,673	[2]2,149	39
Wholesale trade	6,195	25,311	1,120	18
Retail trade	19,115	55,477	4,136	22
Finance, insurance, and real estate	6,639	21,001	2,139	32
Services	26,702	63,877	6,164	23
Government:				
Federal	2,976	(3)	2,976	100
State	4,257	4,437	3,207	75
Local	10,778	15,428	6,661	62

[1] Counts reflect reports used in final estimates. Since not all establishments report payroll and hours information, hours and earnings estimates are based on a smaller sample than employment estimates.

[2] The Interstate Commerce Commission provides a complete count of employment for Class I railroads. A small sample is used to estimate hours and earnings data.

[3] Total Federal employment counts by agency for use in national estimates are provided to BLS by the Office of Personnel Management. Detailed industry estimates for the Executive Branch, as well as State and area estimates of Federal employment, are based on a sample of 5,000 reports covering about 56 percent of employment in Federal establishments.

Reliability of the employment estimates

The estimates derived from the establishment survey may differ from the figures that would have been obtained if it were possible to take a complete census using the same schedules and procedures. The relatively large size of the BLS establishment sample assures a high degree of accuracy. However, since the link relative technique requires the use of the previous month's estimate as the base in computing the current month's estimate, small sampling and response errors may accumulate over several months. To remove this accumulated error, the estimates are adjusted annually to new benchmarks. In addition to correcting sampling and response errors, the benchmark revision adjusts the estimates for changes in the industrial classification of individual establishments resulting from changes in their product. In fact, at the more detailed industry levels, particularly within manufacturing, changes in classification are the major cause of benchmark adjustments. Differences also result from improvement in the quality of the benchmark data. Table A-4 presents the average percent revisions of employment estimates for the five most recent benchmarks, for major industry divisions. Detailed descriptions of individual benchmark revisions are available from the Bureau upon request.

Hours and earnings estimates for cells are computed directly from reported figures and are not subject to benchmark revisions, although the broader grouping

Table A-4. Average benchmark revision in employment estimates and relative errors for average weekly hours and average hourly earnings by industry
(In percent)

Industry	Average benchmark revision in employment estimates[1]	Relative error[2]

[1] The average percent revision in employment for the 1985-89 benchmarks.

[2] Relative errors relate to 1982 data.

[3] Data for government are based on a total count for Federal Government provided by the Office of Personnel Management and a sample of State and local government reports.

Table A-5. Root-mean-square errors of differences between benchmarks and estimates of employment and average relative errors for average weekly hours and average hourly earnings

Size of employment estimate	Root-mean-square error of employment estimates[1]	Relative error[2] (in percent)	
		Average weekly hours	Average hourly earnings
50,000.	2,100	2.2	4.0
100,000	3,900	1.3	2.3
200,000	5,600	1.1	2.0
500,000	14,000	.9	1.6
1,000,000	15,000	.8	1.2
2,000,000	26,000	.5	.9

[1] Assuming 12-month intervals between benchmark revisions.

[2] Relative errors relate to 1982 data.

may be affected slightly by changes in employment weights. The hours and earnings estimates, however, are subject to sampling errors, which may be expressed as relative errors of the estimates. (A relative error is a standard error expressed as a percent of the estimate.) Relative errors for major industries are presented in table A-4 and for individual industries with the specified number of employees in table A-5. The chances are about 2 out of 3 that the hours and earnings estimates from the sample would differ by a smaller percentage than the relative error from the averages that would have been obtained from a complete census.

One measure of the reliability of ratio estimates is the root-mean-square error (RMSE). This measure is the standard deviation adjusted for the bias in estimates:

$$\text{RMSE} = \sqrt{(\text{standard deviation})^2 + (\text{bias})^2}$$

If the bias is small, the chances are about 2 out of 3 that an estimate from the sample would differ from its benchmark by less than the root-mean-square error. The chances are about 19 out of 20 that the difference would be less than twice the root-mean-square error.

Approximations of the root-mean-square errors of differences between final estimates and benchmarks are presented in table A-5. Since the differences are those that have accumulated at the end of 12 monthly estimates, the amount of difference that accumulates in 1 month is much smaller, or approximately 1/12 of the amount indicated.

Seasonal Adjustment

Many economic statistics reflect regularly recurring seasonal movements which can be estimated on the basis of past experience. By eliminating that part of the change which can be ascribed to usual seasonal variation, it is possible to observe the cyclical and other nonseasonal movements in the series. However, in evaluating deviations from the seasonal pattern—that is, changes in a seasonally adjusted series—it is important to note that seasonal adjustment is merely an approximation based on past experience. Seasonally adjusted estimates have a broader margin of possible error than the original data on which they are based, since they are subject not only to sampling and other errors but, in addition, are affected by the uncertainties of the seasonal adjustment process itself.

Since the early 1980's, the BLS has used the X-11 ARIMA (Auto-Regressive Integrated Moving Average) seasonal adjustment procedure to seasonally adjust establishment-based employment, hours, and earnings data. The X-11 ARIMA program has been run once each year after benchmarking and seasonal adjustment factors have been projected and published for 12 months ahead (April-March). Beginning in June 1989, with the introduction of the March 1988 benchmarks, the Bureau introduced a modification to this procedure to parallel that used in adjusting the household survey data in that seasonal adjustment factors are calculated and published twice a year. This schedule was interrupted by the incorporation of the 1987 SIC revision. Effective with the publication of August 1990 data, seasonal adjustment factors for the 9-month period, August 1990-April 1991, were introduced along with the release of March 1989 benchmark levels based on the new SIC structure. Factors for the 6-month period May-October 1991 will be computed and published with the release of May 1991 estimates, reestablishing the practice of publishing 6 months of factors. Revisions of historical data will continue to be made once a year, coincident with the benchmark revisions.

All published, seasonally adjusted series have been revised for the most recent 5 years (1985-90) for the incorporation of new seasonal factors, as is usual. In addition, series affected by the SIC revision which were reconstructed for years prior to 1985 have also been seasonally adjusted again, based on the 1987 SIC-coded estimates.

BLS has developed an extension of X-11 ARIMA to allow it to more adequately adjust for the effects of the presence or absence of religious holidays in the April survey reference period and of Labor Day in the September reference period. Beginning with the computation of projected factors for the period beginning in April 1990, this moving-holiday extension was used for the seasonal adjustment of series on average weekly hours and manufacturing overtime hours. Historical seasonally adjusted series have been recomputed from January 1980 forward to incorporate this adjustment.

All series are seasonally adjusted using multiplicative models under X-11 ARIMA. Seasonal adjustment factors are applied directly to the component series. Seasonally adjusted totals for most of these series are then obtained by taking a weighted average of the seasonally adjusted data for the component series.

Seasonally adjusted average weekly earnings are the product of seasonally adjusted average hourly earnings and seasonally adjusted average weekly hours. Average hourly and weekly earnings in constant dollars, seasonally adjusted, are obtained by dividing average earnings, seasonally adjusted, by the seasonally adjusted Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W), and multiplying by 100. Indexes of aggregate weekly hours, seasonally adjusted, are obtained by multiplying average weekly hours, seasonally adjusted, by production or nonsupervisory workers, seasonally adjusted, and dividing by the 1982 annual average base. For total private, total goods-producing, total private service-producing, and major industry divisions, the indexes of aggregate weekly hours, seasonally adjusted, are obtained by summing the aggregate weekly hours, seasonally adjusted, for the appropriate component industries and dividing by the 1982 annual average base.

Seasonally adjusted data are not published for a number of series characterized by small seasonal components relative to their trend-cycle and/or irregular components. These "failed" or unsatisfactory seasonally adjusted series, however, are used in the aggregation to higher level seasonally adjusted series.

Seasonal adjustment factors for Federal Government employment are derived from unadjusted data which include Christmas temporary workers employed by the Postal Service. The number of temporary census workers for the decennial censuses are removed, however, prior to the calculation of seasonal adjustment factors.

Comparability of Data with Other Series

Current Population Survey

Data based on household interviews are obtained from a sample survey of the population. The survey is conducted each month by the Bureau of the Census for the Bureau of Labor Statistics and provides a comprehensive measure of the labor force, i.e., the total number of civilians 16 years of age and over who are employed or unemployed. It also provides data on their personal and economic characteristics such as age, sex, race, marital status, occupation, industry, hours of work, and duration of unemployment. This information is collected by trained interviewers from a sample of about 60,000 households throughout the country and is based on the activity or status reported for the calendar week including the 12th of the month. These data are published monthly in *Employment and Earnings.* Historical national data appear in *Labor Force Statistics Derived from the Current Population Survey, 1948-87,* BLS Bulletin 2307.

Data from payroll reports and household interviews differ from each other because of differences in definition and coverage, sources of information, methods of collection, and estimating procedures. Sampling variability and response errors are additional reasons for discrepancies. Some specific factors which have a differential effect on levels and trends of the two series are described as follows:

Coverage. The household survey definition of employment comprises wage and salary workers (including domestics and other private household workers), self-employed persons, and unpaid workers who worked 15 hours or more during the survey week in family-operated enterprises. Civilian employment in both agricultural and nonagricultural industries is included. The payroll survey covers only wage and salary employees on the payrolls of nonfarm establishments.

Multiple jobholding. The household survey provides information on the work status of the population without duplication, since each person is classified as employed, unemployed, or not in the labor force. Employed persons holding more than one job are counted only once, and are classified according to the job at which they worked the greatest number of hours during the survey week. In the figures based on establishment records, persons who worked in more than one establishment during the reporting period are counted each time their names appear on payrolls.

Unpaid absences from jobs. The household survey includes among the employed all persons who had jobs but were not at work during the survey week—that is, were not working but had jobs from which they were temporarily absent because of illness, bad weather, vacation, labor-management dispute, or because they were taking time off for various other reasons, even if they were not paid by their employers for the time off. Payroll reports include persons on leave which is paid for by the company and exclude those on leave without pay for the entire payroll period.

Hours of work. The household survey measures hours actually worked, whereas the payroll survey measures hours paid for by employers. In the household survey, all persons with a job but not at work are excluded from the hours distributions and the computations of average hours. In the payroll survey, employees on paid vacation, paid holiday, or paid sick leave are included and assigned the number of hours for which they were paid during the reporting period.

Earnings. The household survey measures median earnings of wage and salary workers in all occupations and industries in both the private and public sectors. Data refer to the usual earnings received from the worker's sole or primary job. Data from the establishment survey refer to average earnings of production and related workers in mining and manufacturing, construction workers in construction, and nonsupervisory employees in private service-producing industries.

County Business Patterns

Data in *County Business Patterns* (CBP), published by the Bureau of the Census, differ from BLS establishment statistics in the treatment of central administrative offices and auxiliary units. Differences also may arise because of industrial classification and reporting practices. In addition, CBP excludes interstate railroads and government, and coverage is incomplete for some of the nonprofit activities.

Employment covered by State unemployment insurance programs

Most nonfarm wage and salary workers are covered by unemployment insurance programs. However, certain employees, such as those working for interstate railroads or members of religious orders working in parochial schools and churches, are not covered. They are included, however, in BLS establishment statistics. Data for railroads are obtained from the Interstate Commerce Commission; data for parochial schools and churches are obtained from the U.S. Office of Education, the National Catholic Welfare Conference, the National Council of Churches, and surveys of churches conducted by several State agencies.

Statistics on manufactures and business, Bureau of the Census

BLS establishment statistics on employment differ from employment counts derived by the Bureau of the Census from its censuses or sample surveys of manufacturing and business establishments. The major reasons for noncomparability are different treatment of business units considered parts of an establishment, such as central administrative offices and auxiliary units, the industrial classification of establishments, and different reporting patterns by multiunit companies. There are also differences in the scope of the industries covered, e.g., the Census of Business excludes professional services, public utilities, and financial establishments, whereas these are included in the BLS establishment statistics.

Appendix B. Conversion to the 1987 Standard Industrial Classification

Effective with the publication of August 1990 data, all industry employment, hours, and earnings series were converted to 1987 Standard Industrial Classification (SIC) codes.[1] This new structure replaces the 1972 SIC coding structure in effect since 1978, for the industry estimates derived from the establishment survey.

The SIC coding system is periodically updated to reflect structural and technological changes in the economy. Growing, emerging industries may be recognized with independent SIC codes for the first time, while SIC codes for declining industries may be eliminated by collapsing them with other like industries into a single SIC code. The 1987 SIC revision marks the first full SIC restructuring since 1972; there were minor updates to the SIC system in 1977.

Scope of the SIC restructuring. Approximately two-thirds of the published industry series were unaffected by the SIC revision. There were almost no changes in scope at the major industry division levels, with only very minor shifts between wholesale and retail trade and between the finance, insurance, and real estate division and services. However, there were several significant redefinitions at the 2-digit level. The most notable were in two divisions, manufacturing and services. In manufacturing, a substantial realignment took place between electronic and other electrical equipment (SIC 36) and instruments and related products (SIC 38). Rubber and miscellaneous plastics products (SIC 30) and stone, clay, and glass products (SIC 32) were also noticeably affected, but to a much lesser degree. In services, a new 2-digit code (SIC 87) was established for "engineering and management services." Most of these activities had previously been classified in business services (SIC 73) or miscellaneous services (SIC 89).

At the 3- and 4-digit SIC levels, changes in scope were both more prevalent and more substantial. Table B-1 lists all 1987 SIC-based published series which are not equivalent to a 1972 SIC-based series and relates them to the 1972-based series from which they were derived. Ratios indicate the percentage of employment in each old series that was allocated to the new series. Table B-1 also lists the beginning year that all-employee data are available for each of these series. Table B-2 lists the 44 previously published 1972-based industry series which were deleted in the conversion to the 1987 SIC structure. It indicates which 1987-based series these were converted to and the percentage of employment from the old series which went to each new series. It should be noted that, in addition to industry stratification changes required by the SIC redefinitions, some changes were made to improve estimating efficiencies.

Reconstruction of estimates. All restructured industries were reestimated using the 1987 SIC-coded sample data from January 1988 forward. Some aggregate level industries, without scope changes, were also affected by the retabulations because they are formed from the summation of restratified, reestimated component industries.

Historical estimates prior to 1988 could not be retabulated from sample data, because sample records provided only 1972 SIC codes. For industries with relatively minor scope changes, historical data were reconstructed back to the inception of the series, wherever possible. The reconstruction of historical series was done by adjusting the existing 1972-based employment series for the percentage of employment lost or the percentage of employment gained from other industries, using ratios derived from first quarter 1988 universe employment data. The first quarter 1988 data represent the only dual SIC-coded data available for developing these adjustment ratios.[2]

Hours and earnings data for restructured series were derived by computing a weighted average of the component series they were derived from. The weights are the percentages of employment each old series contributed to the new series.

Effects due to SIC restructuring. As indicated in table B-3, the SIC revision had a large impact on only a few major industries. For total nonfarm employment, the SIC revision effect, due entirely to restratification and not to any change in scope, was 56,000 or less than 0.05 percent. At the major division levels, the impact varied from 1,000 in mining to 65,000 in services. Almost all of the effect at the major division levels was also from the restratification of industries within these aggregates, not from SIC scope changes. At the detailed industry level, the largest effects of the SIC revision were in business services (-928,000), instruments and related products (+301,000), and electronic and other electrical equipment (-292,000). There were few significant changes at the published aggregate levels.

---

[1] As defined in the 1987 *Standard Industrial Classification Manual,* issued by the Executive Office of the President, Office of Management and Budget.

[2] For additional information, see *Employment Data Under the New Standard Industrial Classification, First Quarter 1988,* Report 772, October 1989.

Among average weekly hours estimates, only transportation and public utilities showed a significant effect from recomputation, a downward revision of 0.6 hour. Among average hourly earnings series, both electronic and other electrical equipment and instruments and related products showed large, partially offsetting changes, due to SIC redefinitions. Other differences were much less significant. At the total private level, hours and earnings were unchanged (table B-3). With respect to seasonally adjusted data, all published series were revised for the most recent 5 years (1985-90) for the incorporation of new seasonal factors, as is usual. In addition, series affected by the SIC revision which were reconstructed for years prior to 1985 have again been seasonally adjusted, based on the 1987 SIC-based estimates.

For additional information on the SIC revision and its effect on published series, see Patricia M. Getz, "BLS Establishment Estimates Revised to March 1989 Benchmarks and 1987 SIC Codes," *Employment and Earnings*, September 1990, pp 6-34.

Appendix C. Availability of published series

The CES program uses payroll reports from over 340,000 establishments to provide monthly estimates of employment, hours, and earnings in considerable industry detail. Estimates are prepared at the 4-digit SIC level for manufacturing industries and the 3-digit SIC level for most nonmanufacturing industries.

At the national level, the CES program currently produces more than 3,500 separately published series each month. Table C-1 provides a summary of the published national detail on an unadjusted and seasonally adjusted basis by major industry division. In addition, there are numerous series that are specially derived such as the indexes of aggregate weekly hours and payrolls; diffusion indexes of employment change; average hourly earnings, excluding overtime, for manufacturing production workers; and average hourly earnings, including and excluding lump-sum payments for selected aerospace industries.

In addition to the series published on a current monthly basis, March benchmark employment levels are published in *Employment and Earnings* for a number of industries for which monthly estimates do not meet established publication standards. In the September 1990 issue of *Employment and Earnings*, March 1989 benchmark data for over 600 industries were published coincident with the introduction of March 1989 benchmarks and conversion to the 1987 SIC structure.

Table C-1. Number of basic national series[1] on employment, hours, and earnings published from the Current Employment Statistics program by industry, September 1990

Industry	All employees	Production workers[2]	Women workers	Average weekly hours	Average weekly overtime hours	Average hourly earnings	Average weekly earnings

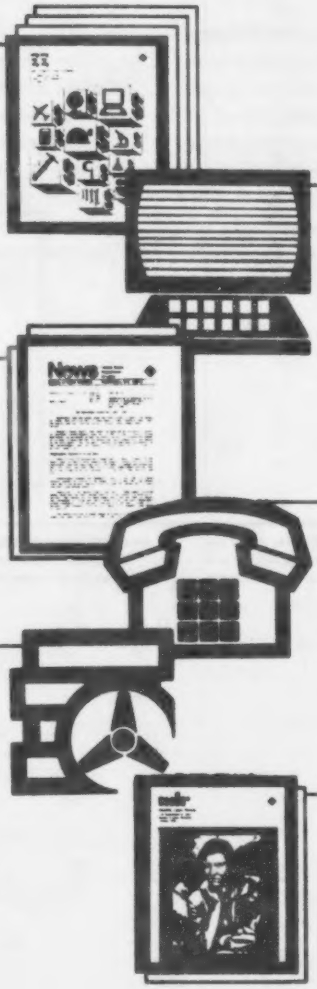
[1] In addition to these series, which are computed directly from the sample and benchmark data, there are several derivative series. These include indexes of aggregate weekly hours and payrolls; average hourly and weekly earnings in 1982 dollars; average hourly earnings, excluding overtime, for manufacturing production workers; and diffusion indexes of employment change.

[2] Production workers in mining and manufacturing; construction workers in construction; and nonsupervisory workers in all other industries.

Where to Find Information on Employment and Unemployment



Employment and Earnings:

Monthly periodical containing labor force and establishment data. National, State, and area figures on employment, unemployment, hours, and earnings. Order *Employment and Earnings* from Superintendent of Documents, U.S. Government Printing Office, Washington, DC. 20402. Includes text, statistical tables, and technical notes.

Electronic News Release:

Quickest. Accessible electronically immediately at release time through BLS news release service. Write the Office of Publications, Bureau of Labor Statistics, Washington, DC. 20212, or call (202) 523-1913.

Employment Situation News Release:

Copies of this national monthly release reach the public about a week after the release date. Write: Inquiries and Correspondence, Bureau of Labor Statistics, Washington, DC 20212.

Telephone:

Quick summary on 24-hour recorded message. Key numbers, plus other BLS indicators and upcoming release dates. Call (202) 523-9658.

Machine-Readable Form:

Labor force data from the household survey and employment, hours, and earnings data from the establishment survey are available on both computer tape and diskette. For information, write the Office of Publications, Bureau of Labor Statistics, Washington, DC. 20212 or call (202) 523-1090.

Monthly Labor Review:

Employment and unemployment statistics included in monthly 53-page summary of BLS data and in analytical articles. Available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The Bureau of Labor Statistics' Bulletin on Employee Benefits in Medium and Large Firms, 1989

U.S. Department of Labor
Bureau of Labor Statistics
Bulletin 2363

Employee Benefits in Medium and Large Firms, 1989

Data available

Incidence and detailed characteristics of 15 employee benefits paid for at least in part by employer: Lunch and rest periods, holidays, vacations, and personal, funeral, jury-duty, military, parental, and sick leave; sickness and accident, long-term disability, and life insurance; health care; and private retirement/capital accumulation plans. Retirement data include defined benefit plans and defined contribution plans, such as savings and thrift plans with salary reduction arrangements permitted under the Internal Revenue Code.

Incidence and provisions of flexible benefits plans, reimbursement accounts, and unpaid parental leave.

Incidence data on 21 other benefits, including educational assistance, subsidized parking, subsidized child care, wellness programs, and employee assistance counseling programs.

Data are presented separately for three occupational groups—professional-administrative, technical-clerical, and production-service workers.

Coverage

Major benefits in private sector establishments of the United States, except Alaska and Hawaii, employing at least 100 workers.

Source of Data

Sample of about 2,000 establishments in a cross-section of the Nation's private industries; primarily by personal interview.

Uses

Benefit administration in public and private employment.

Union contract negotiations.

Conciliation and arbitration in public and private sectors.

Development of legislation affecting the welfare of workers.

Also available

The 1987 survey of employee benefits in State and local governments.
